

Pyramid of Cheops MAXI

GENERAL INFORMATION

The Khufu pyramids are convincing because of their great scope, which is almost equal to the total diameter of the pyramid. The square meshes enable unlimited climbing pleasure in airy heights. The square and rectangular meshes make a comfortable Ascending and descending possible.

Inside the pyramid there are numerous Equipment elements for varied playing. Patented knot balls are used as knot connections. This makes it easy to replace individual ropes on site.

The middle steel mast has a high-quality hot-dip galvanisation. The Hercules ropes (16 mm) have individually galvanised steel strands with polyester yarn coating. The sheathing has a very high abrasion, UV and colour resistance. Each individual strand is additionally heat-set, which results in a very good connection between steel strand and textile fibre. The Cheops pyramids require a concrete foundation.

ATTENTION: The ground anchorages are not included in the price.

These make the month much easier! The pyramid can of course also be erected without the ground anchor set.

-  **Dimensions:** Ø 11,00
-  **Total height:** 5,60 m
-  **Falling area (M):** Ø 13,00

 **Age group:** 6 and older
