-  **Dimensions:** 4,97 x 2,84 x 1,18
-  **Total height:** 1,18 m
-  **Free fall height:** 0,41 m
-  **Falling area (M):** 7,99 x 5,85
-  **Falling area (M):** 34,00 qm
-  **Age group:** 0,75 and older
-  **Catalog page:** Page 46

"With an exciting mix of different balancing elements and bridges, **FRISIA** invites you to train your sense of balance, body tension, concentration and coordination in a playful way. Children and young people, but also adults and seniors, can live out their natural need for movement at different levels of difficulty, while also exploring and expanding their own abilities. The modular construction principle of the KIT+ system allows the individual design of age-appropriate and safe exercise courses and play areas in any size and style. Everything fits together and can be combined with each other. The extremely stable stand posts are available in three variants:

- Larch wood - untreated, incl. hot-dip galvanised post shoes.
- Stainless steel - glass bead blasted
- Color - powder-coated stainless steel (RAL colours)

EQUIPMENT

The **FRISIA** balancing combination A exists of 4 bridges and 2 base platforms.

MATERIAL

POSTS

- Larch wood - untreated, incl. post anchor
- Stainless steel - glass bead blasted
- Color - powder-coated stainless steel

SYSTEM COMPONENTS

- Outdoor HPL (High Pressure Laminate)
- Larch wood untreated
- Stainless steel
- Post anchor: hot-dip galvanised steel

FRISIA PLAY SYSTEM MODULES

All modules of the **FRISIA** play system can be combined with each other and can easily be put together to form an individual multi-play facility with an attractive range of play and movement options for every age group.

FRISIA is based on components of the KIT+ system, just like the **ETOLIS®** and **HARENA** product groups, and can therefore be combined with and under each other. In this way, cross-age and inclusive play design for all ages and abilities is possible.
